FRONTEND ASSIGNMENT

Build a Marketing Website in Next.js

Meru Technosoft Private Limited · Frontend Internship Selection

Candidate name	
Assigned site	Raivatedu
Assignment start (date / time)	
Submission deadline	3 days (72 hours) from start
Submit to	Reply to the assignment email / Internshala message with the links in Section 8

1. Overview

You will design and build a small, production-quality marketing website in Next.js. Each candidate is allotted ONE of four brands (Surhires, Raivatedu, KanchanFlow or UdayBooking). The brand briefs in Section 5 describe the business, tone and pages. Everything else (layout, visual design, copy, animation) is yours to decide – that is what we are evaluating.

This is a frontend-only task. No backend, database or login is required. Forms only need front-end validation and a success state.

2. Tech requirements

Item	Requirement
Framework	Next.js (latest stable) using the App Router (app/ directory)
Language	JavaScript or TypeScript (TypeScript preferred, not mandatory)
Styling	Tailwind CSS (or CSS Modules). No pre-built UI kits that do the design for you (Bootstrap themes, purchased templates).
Components	Small reusable components (Navbar, Footer, Button, Card, Section, FAQ accordion, etc.)
Images & fonts	Use next/image and next/font. Free stock images / icons only (Unsplash, Lucide, Heroicons). Add alt text.
Animation (optional)	Light, purposeful motion only (CSS or Framer Motion). Must respect prefers-reduced-motion.
Hosting	Deploy to Vercel (free) or Netlify and share the live link

3. What to build

Build 3 pages for your assigned brand: a Home page and 2 inner pages listed in your brief (Section 5). All pages share one Navbar and one Footer.

Must-have on every page

- **Navbar:** sticky, with logo/wordmark, 4–5 links, a primary CTA button, and a working mobile menu.
- **Footer:** link columns, short brand blurb, copyright, social icons (placeholder links are fine).

- **Typography & spacing:** a consistent type scale, spacing scale and colour tokens (define them once in the Tailwind config or CSS variables).
- **Interactive states:** hover, focus-visible, active and disabled states on all buttons, links and inputs.
- **Copywriting:** write realistic, specific headlines and body copy. No "Lorem ipsum" anywhere.

4. Quality bar

- **Responsive:** must look right at 360px, 768px, 1024px and 1440px wide. No horizontal scrolling on mobile.
- **Accessibility:** semantic HTML (header, nav, main, section, footer), one h1 per page, labelled form fields, keyboard-usable menu and accordion, colour contrast of at least 4.5:1 for body text.
- **SEO basics:** unique title and meta description per page using the Next.js metadata API, an Open Graph title/description, a clean heading hierarchy, and descriptive link text.
- **Performance:** Lighthouse (mobile) target of 85+ on Performance and 90+ on Accessibility and SEO. Include a screenshot of your scores.
- **Code quality:** clear folder structure, meaningful component and variable names, no dead code, no console errors or warnings in the browser or terminal.
- **Git hygiene:** at least 8 meaningful commits with clear messages. A single "final commit" will lose marks.

5. Brand briefs (build only your assigned site)

Brief details are a starting point. Where a detail is missing, make a sensible decision and note it in your README.

5.1 Surhires

Business	Hiring / recruitment platform for employers and job seekers
Tone & feel	Professional, trustworthy, energetic. Clean white space, one confident accent colour.
Colour direction	Suggested: deep navy + teal accent + warm white. Candidate may propose their own with a one-line reason.
Pages to build	Home: hero with "Hire faster" / "Find a job" dual CTA, how-it-works (3 steps), featured roles grid, employer logos strip, testimonials, FAQ, footer CTA Jobs listing: filter bar (role, location, type), job cards, empty state Employers page: pricing/plans table (3 tiers) and "Post a job" form UI

5.2 Raivatedu

Business	Education / learning platform (courses, mentors, admissions)
Tone & feel	Friendly, inspiring, youthful but credible. Rounded shapes, generous illustrations or icons.
Colour direction	Suggested: indigo + sunny yellow accent + soft off-white. Candidate may propose their own with a one-line reason.
Pages to build	Home: hero with course search, popular categories, featured courses grid, mentor/faculty cards, student success stats, testimonials, FAQ, footer CTA Courses listing: category filter, course cards (price, duration, level), sort control Course detail: syllabus accordion, instructor box, sticky enrol card, reviews

5.3 KanchanFlow

Business	Manufacturing CRM (quotes, work orders, shop-floor sales pipeline) – kanchanflow.com
Tone & feel	Industrial-modern and bold, but still B2B-credible. Strong typography, confident contrast; avoid generic SaaS gradients.
Colour direction	Suggested: charcoal/graphite + molten gold (Kanchan = gold) accent + light steel grey. Candidate may propose their own with a one-line reason.
Pages to build	Home: hero with product UI mockup, problem/solution section, 6 feature cards (quote-to-order, BOM, pipeline, WhatsApp, reports, mobile app), industries strip, pricing teaser, FAQ, footer CTA Features page: alternating feature rows with screenshots/placeholders and a comparison-style table Pricing page: 3-plan cards with monthly/annual toggle and an FAQ accordion

5.4 UdayBooking

Business	Scheduler / appointment-booking product for small businesses
Tone & feel	Calm, simple, fast. Light UI, clear calendar-inspired visuals, lots of breathing room.
Colour direction	Suggested: fresh green or sky blue + near-black text + light neutral background. Candidate may propose their own with a one-line reason.
Pages to build	Home: hero with booking-widget mockup, how-it-works, feature grid (calendar sync, reminders, payments, team scheduling), use-case tabs (salon, clinic, coaching), pricing teaser, FAQ, footer CTA Features page: feature sections with UI mockups and an integrations strip Book-a-demo page: form UI with date/time slot picker (static slots are fine)

6. Rules

- The work must be your own. You may use documentation, tutorials and AI assistants for help, but you must be able to explain every line of your code in a follow-up call. Copy-pasted templates or cloned websites will be disqualified.
- Do not copy another company's logo, brand assets or copy. Use a simple text wordmark or your own logo mark.
- Do not use paid templates or website-builder exports (Wix, Framer, Webflow, etc.).
- Late submissions are accepted only if you inform us before the deadline with a valid reason.

7. Evaluation (100 marks)

Area	Marks	What we look for
Visual design & brand fit	25	Hierarchy, spacing, colour, typography, and how well it matches the brief's tone
Responsiveness	15	Clean layout on mobile, tablet and desktop; working mobile menu
Code quality & structure	20	Reusable components, naming, folder structure, Next.js features used correctly
Accessibility & SEO	10	Semantic HTML, metadata, contrast, keyboard use
Performance	10	Lighthouse scores, optimised images and fonts

Area	Marks	What we look for
Copy & content realism	10	Specific, believable text; no placeholder text
Polish & interactions	5	Hover/focus states, subtle motion, empty and success states
Git history & README	5	Meaningful commits; README explains setup and decisions

Bonus (up to 5 extra marks, only after everything above is solid): a dark-mode toggle, a smooth page transition, or a small animated hero.

8. What to submit

- GitHub repository link (public, or private with access shared). Do not upload a zip file.
- Live deployed link (Vercel or Netlify).
- A README.md with: how to run the project, the colour and font choices, any assumptions you made, and what you would improve with more time.
- A screenshot of your Lighthouse mobile scores.
- A 1–2 minute screen recording or Loom walkthrough of your site on desktop and mobile (optional but encouraged).

9. Suggested 3-day plan

Day	Focus
Day 1	Read the brief, collect references, choose palette and fonts, set up the Next.js project, build Navbar, Footer and base components, build the Home page hero and first two sections.
Day 2	Finish the Home page, build both inner pages, make everything responsive, add metadata.
Day 3	Accessibility pass, Lighthouse fixes, polish and interactions, README, deploy, final check on a real phone, submit.

If you have questions about the brief, send them in one message within the first 4 hours. Good luck – we are looking forward to seeing your work.
